3MTM Double Coated Tapes with 3MTM Adhesive 300MP feature a thin polyester film for dimensional stability and improved handling with ease of die cutting and laminating. 3M adhesive 300MP offers excellent adhesion to many plastics and good shear strength and provides exceptional temperature and chemical resistance that withstands tough application environments. For information on storage and usage tips regarding the 3M adhesive 300MP products, please refer to technical bulletin 70-0709-3905-6.

Note 1: Faceside adhesive is on the interior of the roll.

The caliper listed is based on a calculation from manufacturing controlled adhesion coat weights using a density of 1.012 g/cc. While past data pages have listed a nominal caliper of 4.8 mils for 3M tapes 9690 and 9690B the coat weight has not changed.

Backside adhesive is on the exterior of the roll.

Note 2: PET (Polyester).

3M[™] Double Coated Tapes with Adhesive 300MP 9687 • 9690 • 9690B • 9690F • 9609 • 9490LE

Features	 3MTM Double Coated Tape 9490LE features 3MTM Adhesive 300LSE on the backside of the tape for bonding to low surface energy substrates such as oily metal or polypropylene. 3MTM Double Coated Tape 9690B has a black film carrier which provides opacity and visibility. 				
	 3MTM Double Coated Tape 9690F is provided on a film liner for ease in rotary diecutting and for applications that demand low particle generating parts. 3MTM Double Coated Tape 9609 provides easier handling and good gap filling for rigid to rigid substrate bonding. 				
Application Techniques	Bond strength is dependent upon the amount of adhesive-to-surface contact developed. Firm application pressure helps develop better adhesive contact and improves bond strength.				
	To obtain optimum adhesion, the bonding surfaces must be clean, dry and well unified. Some typical surface cleaning solvents are isopropyl alcohol or heptane.*				
	Ideal tape application temperature range is 70°F to 100°F (21°C to 38°C). Initial tape application to surfaces at temperatures below 50°F (10°C) is not recommended because the adhesive becomes too firm to adhere readily. However, once properly applied, low temperature holding is generally satisfactory.				
	*Note: Carefully read and follow the manufacturer's precautions and directions for use when working with solvents. These cleaning recommendations may not be compliant with the rules of certain Air Quality Management Districts in California; consult applicable rules before use.

Adding Liners to 3M TM Double Coated Tapes with 3M TM Adhesive 300MP	 Rotary processing, tape only, on a densified (outside of #4994) kraft liner. In this process the tape waste will stay with the 83# PCK liner, leaving adhesive die-cuts dispensable from the #4994 (densified kraft) liner. Rotary processing for finished parts. It is most efficient to use the polyester linered double coated 3M tape 9690F. Current process limitations prevent the supply of 3MTM Adhesive 300MP on a DK liner.

Application Equipment	To apply adhesives in a wide web format, lamination equipment is required to ensure acceptable quality. To learn more about working with pressure-sensitive adhesives please refer to technical bulletin, Lamination Techniques for Converters of Laminating Adhesives (70-0704-1430-8).
